

Doll Rocking Chair Plans

List of materials.

This toy can be made from leftover bits in your scrap box. This one was made with 3mm Medium Density Fibreboard, also known as MDF.

Tools you may need.

Scroll saw.

Most if not all hobby woodworkers and handymen (or handywomen) will have a selection of tools to complete this simple project.

Step by step instructions.

Construction is quite straightforward.

Paste the paper patterns on to the board. I used a paper glue stick, some people prefer to use spray glue.

To make the sides identical, I attach two boards together with double sided tape.

Step 1

Cut out the shapes. Step 2

Slot the parts together. Glue is optional.

Drill a hole in the seat tab, and insert a small wooden pin shown yellow in the photo above.

Finishing

Paint the toy in your favourite colour.

Conclusion

I certainly hope you have enjoyed making this project. Use this [contact me](#) form if you would like to submit your project to the [photo gallery](#).
